

Quality engineering - Made in Germany: functional, robust and reliable

Jungheinrich drive axle and maintenance-free wet-disc brakes with electric parking brake

High visibility in all directions due to unique 'vision window' mast design

Truck design concept giving high productivity with low fuel consumption and high dynamic stability

Rugged Kubota industrial engines with high torque at low revs

4 point cushion mounted drive train giving a low-vibration operators cab area

DFG/TFG 316/320

Diesel and LPG forklifts with hydrodynamic drive (Torque Converter) (1,600/2,000 kg)

Our robust torque converter counterbalance trucks give you high productivity coupled with high reliability in all applications. The simple design of the torque converter drive train allows it to be used in a wide range of rugged and industrial operations; in addition it provides smooth power take up whilst accelerating, producing optimum efficiency at all speeds.

The rugged Kubota engines have been tried and tested throughout the world in harsh environments, including high and low temperatures, high humidity and tough terrains, returning optimum reliability.

Giving the strong benefit of lower fuel consumption and minimal noise. These robust engines are specifically designed for use in fork lift trucks. Giving you outstanding reliability and a long service life.

High levels of efficiency are delivered through the Jungheinrich

drive axle with integrated, maintenance free wet-disc brakes. Eliminating unnecessary costs associated with brake wear and lowering overall lifetime costs. The enclosed design of the braking system helps protect it by eliminating ingress of water or dust, which is typical in harsh conditions.

The operators cab is designed with the operator in mind. The visibility in all directions is class leading enhancing all round safety, resulting in a safe and productive driver maximising throughput throughout the shift.

Due to the unique Jungheinrich counterweight design, the centre of gravity is both low and centred between both front and rear the axles. This results in best in class dynamic stability and driving safety without unnecessary external electronic stability systems.

¹⁾ Integrated Sideshifter +27,5 mm

DFG/TFG 316/320

Standard delivery specification

- Operators cab entry handle on upright of overhead load guard. High visibility overhead load guard suitable, as standard, for containers.
- Hydraulic steering on demand with load sensing technology.
- Steering column with adjustable tilt.
- Travel direction lever mounted on steering column.
- Individual hydraulic levers on the operators dashboard.
- Instrumentation with glare-free display for hour meter and tank capacity. Indicator lights for: - engine oil pressure, coolant temperature, battery charge, parking brake, transmission oil temperature, brake fluid level, neutral display, low fuel level warning (diesel), electronic preheating (diesel) and water in the diesel filter.
- Acoustic warning for excess coolant temperature.
- MSG20 faux leather seat with automatic lap belt and mechanical suspension. Setting options: Fore and aft adjustment, backrest tilt and weight adjustment (up to 130 kg).
- Functional storage compartments suitable for everyday use including a drink holder.
- Anti-noise and vibration rubber floor mat.
- Standard automotive pedal layout.
- Wet maintenance-free disc brakes with electric parking brake and audible safety warning.
- Two front halogen spotlights and two brake/rear lights on rear counterweight.
- Hydraulic control valve incorporating load sensing technology.
- Full-flow hydraulic oil filtration with suction and return filtering for maximum oil purity.
- Heavy duty cyclonic air cleaner.
- Oil cooler for torque converter and transmission oil.
- Closed pressurised cooling system.
- Enclosed towbar on counterweight.
- Full length belly plate.

Benefit from the advantages

Entry via a deep, wide step. Large, strong grab handle welded to the overhead guard.

Display in the operator's field of vision.

Automotive pedal configuration with non-slip surface.

Optimum view of the load thanks to lift mast design giving ideal visibility.

Powerful and efficient drive concept

- Tried and tested in harsh construction environments, industrial engines from Kubota in diesel and LPG models.
- Sturdy and modern engines. Designed for durability, high load capacity and reliability.
- High torque at low engine revs.
- Engine timing via inclined spurtoothed wheels.
- Engines with low emissions (diesel engines as per Directive 97/68/ EU stage 3A).

Ergonomic operator workstation

- The visibility in all directions is class leading enhancing all round safety.
- Entry via a deep, wide step. The step is clearly visible from the seated position.
- Large, strong grab handle welded to the overhead guard.
- Generous knee and legroom thanks to slim and easily adjustable steering column.
- Ergonomic steering wheel offset to the left.
- Effortless operation with hydraulic power assisted steering.
- Large, level footwell with vibration absorbing floor mat.
- Sturdy hydraulic levers positioned for easy use even when wearing gloves.
- Comfortable operators seat with excellent suspension and numerous adjustment options.
- Displays and switches for additional equipment (e.g. lighting and wipers) are positioned within the operator's reach and field of vision.
- Numerous storage options, such as drink holder, documents clip and a compartment for every day objects.
- Electrically applied parking brake, easily operated at the push of a button. Eliminating the usual knock on/knock off lever which restricts access in the knee and entry area.
- Automotive pedal layout with non-slip anti vibration surface.

Mast and hydraulics

- Smooth transitions provided by the mast cushioning system.
- High residual capacity at high lift heights.
- High visibility due to unique vision window.

- Flush face mast channels reducing the lost load centre.
- Hydraulic hoses routed for optimum visibility.
- Vision windows in the free lift cylinder cross-member, make it safer to work at higher racking levels.
- Hydraulic control valve incorporating load sensing technology. Due to the lower pressure level, the load sensing system reduces the energy consumption whilst keeping the unnecessary pumping losses to a minimum.

Jungheinrich drive axle with maintenance-free wet-disc brakes

- Axle concept with optimised efficiency for low fuel consumption.
- The oil immersed wet-disc braking system is maintenance-free. There are virtually no service costs (in comparison with conventional drum braking systems).
- No negative effect on braking due to environmental influences or service related downtime due to the enclosed design.

Uncoupled power train

Improved operator comfort and reduction of unnecessary vibrations. These are kept to a minimum with:

- Floating drive unit.
- Independently mounted axle and drive train via heavy duty coupling.

Enclosed high-performance cooling system with combi cooler

- Heavy duty combi cooler in full aluminium design for engine coolant, converter and transmission oil – without the common plastic manifold which are susceptible to faults.
- Easy to clean with radiator cores of the cooling elements for engine coolant, converter and transmission oil.
- No coolant evaporation due to completely enclosed pressurised system.
- Reliable operation without a reduction in performance even at extreme ambient temperatures.

Easy to maintain and repair

- Optimum access to engine compartment due to 90° opening and L-shaped cover.

- Side sections and floor plate easily detachable without the need for tools.
- Minimal truck downtime thanks to simple, rapid and cost-effective maintenance – expert knowledge not required.
- Use of sturdy, high-quality components.
- No truck-specific diagnostic tools or special software required.
- Large fuel filter with water separator.
- Oil change interval 500 hours.

Reliable, heavy-duty electrical equipment

- Splash-proof electrics, plug and connections.
- Easily accessible at all times, compact fuse box on the operators console in the drivers compartment.

Jungheinrich high-mounted fully floating axle for high degree of passive safety

Even during dynamic travel, outstanding driving stability through reduced pendulum motion is guaranteed by the high pivot point of the steering axle. The risk of tip over is minimised by applying basic physics. Without the additional use of electronic assistance systems.

Optimised counterweight design

- The counterweight design displaces the centre of gravity downwards and forwards.
- The truck's centre of gravity is low and is situated between the front and rear axles.

Additional comfort equipment in different models (optional)

- Windscreen and rear window made of single-pane safety glass.
- Overhead roof panel made of laminated safety glass.
- Heated rear window (with vertical sliding window).
- Wipers and washer system for windscreen and rear window.
- Steel doors with sliding windows.
- Heating including windscreen demisters.
- Panoramic interior mirror.
- Left and right rear view mirrors.
- Armrest.

Benefit from the advantages

Simple, fast and affordable maintenance.

Side sections are easily detachable without tools.

Electrically applied parking brake, easily operated at the push of a button.

Heating including air demister for windscreen.

- Comfort seats in fabric or synthetic leather.

Benefit from our safety and environmental benefits:

- Automatic hydraulic and travel interlock when the operator leaves the seat. All hydraulic functions and travel are only possible when the seat is occupied.
- Acoustic warning when the operator's seat is vacated, if the parking brake is not applied.
- Transmission is automatically placed into neutral as soon as operator leaves the truck.
- All diesel engines comply with the EU exhaust emissions stage 3A regulations.
